

Living intelligence — from data to decision, in the palm of your hand.

Data and AI that reach production: in the lab, in the company and in the health department.

SyntenIA is a technology company with three fronts: consulting, its own products and an R&D lab. What the research finds becomes a platform, and what the platform learns goes back to clients.

A Consulting Cartography, integration, AI and cloud for companies and government.	B Products GeSUS and Clareja (for accountants and for lawyers): SaaS built and operated in-house.	C R&D A lab for genomics, applied AI and field sensors, with open scientific platforms.
---	---	---

01 · CONSULTING

From source to river mouth, by people who have shipped platforms

01 IT and digital transformation

Cartography of systems and data, architecture and an execution plan with explicit priorities, costs and risks.

02 Bioinformatics and health data

Genomics pipelines at scale, epidemiological surveillance, and clinical and laboratory data science.

03 AI adoption

LLMs, RAG, agents and automation deployed with governance: traceable data, human review and controlled cost.

04 Integration and data engineering

Systems that do not talk to each other today start feeding the same base, from ETL to dashboard.

05 CRM and ERP

Selection, implementation and integration, measured by the process that improves rather than the licence sold.

06 Cloud, outsourcing and operations

Environments that switch off when nobody is using them and a cloud bill that fits the budget.

07 SaaS and custom platforms

From prototype to published product, including white-label and apps in the stores.

08 Heavy infrastructure

HPC, clusters and GPUs, petabyte storage, data centres and hybrid cloud, networks and sequencing at scale: we size it, build it and run it.

Every solution and module is customisable: each delivery is fitted to the processes, systems and rules of the people who use it.

ABOUT

A technology company with Amazonian DNA

The team is multidisciplinary: data scientists, software engineers, DevOps, data architects, physicians, a sanitary engineer and an environmental engineer, working together from data to decision.

Platforms we build and operate ourselves

GeSUS

For Brazilian municipal and state health departments

Integrated management of Brazil's public health system (SUS): shows, by team and by territory, how much federal co-funding is at risk and what to do to recover it.

[Primary care co-funding indicators, by team](#) · [BI, maps and AI-generated reports with traceable numbers](#) · [Citizen assistant and financial compliance](#)

GeSUS Saúde

Citizen app

Your health in the palm of your hand: with their national health number, citizens see the nearest units and services on a map, their vaccine doses and their appointments.

GeSUS Vacina

Offline app for campaigns and schools

Records doses on the phone, at school or in a mass campaign, with no signal, and syncs later: no paper, no retyping, and managers see coverage by vaccine and age group.

GeFin

Intelligent Financial Management

Health fund money reconciled end to end: transfers, payments, commitments and contracts, with reports where the engine calculates and the AI only writes.

GeCon

Intelligent Contract Management

Every health contract with its deadline, balance and payments under control, before it expires and not after.

GeEXE

Management Excellence Index

A 0–100 score per pillar (health, fiscal, education, infrastructure, sustainability, development) from public data only: rankings, map, what weighs on the score and an AI report on how to raise it. 562 municipalities (PA, AM, MA, TO).

Clareja

Brazil's tax reform (CBS/IBS) · two products

Brazil's tax reform explained to the end client, in a business owner's language and under the brand of whoever signs it. Calculations under Complementary Law 214/2025, and projections always labelled as projections.

Clareja for Accountants

Accounting firms and accountants

CBS/IBS reports per client, with the firm's logo, colours and contact details, ready to send.

Clareja for Lawyers

Law firms

Guidance notes on CBS/IBS under the firm's brand, reviewed and signed by the responsible lawyer. Each note shows where a full legal opinion is advisable.

All products and modules are customisable: branding, rules, integrations and reports adapt to each client.

The lab is where the products begin

SyntenIA keeps a permanent research and development front. It was born in genomic surveillance, where a data error becomes a public health error. We bring that standard of traceability to everything else.
